Amendments to the Claims:

The listing of claims will replace all prior versions, and listings, of claims

in the application:

**Listing of Claims**:

1. (Currently Amended) A device for storing a plurality of protective

cases on a holding element, wherein the protective cases each have an insertion

opening on one end face for inserting flat information carriers and a second face

which rests at least partially on the holding element, and wherein, in an edge

area, the holding element has a tab which engages in a recess in each said

second face of each protective case such that a respective protective case can be

pivoted from a storage position into a removal position in which an information

carrier can be removed from, or inserted into, said respective protective case,

wherein each protective case can be detached from the holding element in the

storage position.

2. (Currently Amended) A device according to claim 1, wherein the said

information carriers are CDs or DVDs.

3. (Canceled).

4. (Original) A device according to claim 1, wherein each protective case

can be detached from the holding element in the removal position.

5. (Currently Amended) A device according to claim 1, wherein the each

recess is conical and has at least one stop face, which in the removal position

contacts a stop face of the tab.

6. (Original) A device according to claim 5, wherein the stop face of the

tab is substantially perpendicular to the holding element.

7. (Currently Amended) A device according to claim 1, wherein the each

recess has an access opening in the second face of each protective case, which is

adapted to a shape of the tab, such that the dimensions of the access opening are

slightly larger than the dimensions of the tab.

8. (Currently Amended) A device according to claim 1, wherein a center

of mass of each the protective case eases is arranged relative to a pivoting point

of each respective protective case the protective cases such that an automatic

pivoting of each the protective case eases from the removal position or from the

storage position is excluded.

9. (Currently Amended) A device according to claim 1, wherein the a

center of mass of the each protective eases case relative to a pivoting point of the

each respective protective eases case is arranged such that each the protective

case eases automatically pivots pivot into the removal position or the storage

position once the center of mass is shifted over an intermediate position between

the storage position and the removal position.

10. (Original) A device according to claim 1, wherein the tab has a

rectangular cross section and extends almost entirely across the width of the

holding element.

11. (Currently Amended) A device according to claim 1, wherein the each

recess is a through opening.

12. (Original) A device according to claim 1, wherein the holding element

has a rear wall.

13. (Currently amended) A device according to claim 12, wherein the rear

wall has a tongue element, and a face of the protective case is associated with the

rear wall and has a correspondingly shaped groove that rests at least partially on

said tongue element.

14. (Original) A device according to claim 1, wherein the holding element

has sidewalls.

15. (Original) A device according to claim 1, wherein the holding element

has a cover member.

16. (Original) A device according to claim 1, wherein the holding element

has a rear wall, sidewalls and a cover member.

17. (Original) A device according to claim 1, wherein at least one

additional holding element can be attached to the holding element using at least

one connecting device.

18. (Currently Amended) A device according to claim 17, wherein the at

least one connecting device is arranged in such a way that the holding element

can be expanded both horizontally and vertically.

19. (Currently Amended) A device according to claim 17, wherein the at

least one connecting device has at least one groove-shaped recess each in the

holding elements to be connected and a connecting element arranged at least in

sections inside the each respective recess.

20. (Currently Amended) A device according to claim 19, wherein the

connecting element is detachably fixed inside the at least one groove-shaped

recess.

21. (Currently Amended) A device according to claim 19, wherein the

connecting element is arranged in the at least one groove-shaped recess in a

positive locking manner.

22. (Currently Amended) A device according to claim 19, wherein the at

<u>least one</u> groove-shaped recess has a dovetail profile.

23. (Original) A device according to claim 1, wherein further comprising a

pivotable flap for covering the insertion opening of each protective case in the

storage position.

24. (Currently amended) A device according to claim 23, wherein the

pivotable flap is hinged to a rear wall of the holding element.

25. (Original) A device according to claim 24, wherein the rear wall has a

tongue element, and a face of the protective case associated with the rear wall

has a correspondingly shaped groove that rests at least partially on said tongue

element.

26. (Original) A device according to claim 1, wherein the holding element

has a catch, which prevents the pivoting of the protective cases from the storage

position into the removal position.

27. (Original) A device according to claim 1, wherein the holding element

is or the protective cases are at least partially made of a transparent material.

28. (Currently Amended) A device according to claim 1, wherein the

holding element is provided with lighting means a light source.

29. (Currently Amended) A device according to claim 28, wherein the

lighting means-includes at least one light source is integrated into the a cover

element.
